Figure: Geotail EPI data showing 1/[cm^2 s sr keV] vs. UT and X, Y, Z GSM (GSE) coordinates. Data points represent 67 keV and 129 keV proton counts. Key features include changes in flux levels and spatial distributions across different solar and tailward directions (Sun/Tail, Dusk/Dawn, Tail/Sun). The data is plotted using a logarithmic scale for 1/[cm^2 s sr keV].
