The image contains a plot from GEOTAIL EPIC, showing various energy and velocity distributions for different mass/charge species. The plot includes data for ions such as H+, BH+, He+, and others, with energy values ranging from several keV to a few keV. The plot also shows the dB/B (nT) values over time from 1200 UT to 0000 UT, with X_GSM, Y_GSM(GSE), and Z_GSM(GSE) values provided for different times. The data is plotted with logarithmic scales for both energy and dB/B values.
